

## **FS; Oil Cooler Conversion Parts**

Posted by phlip - 08 Dec 2012 10:27

---

951 oil filter housing, cooler, rubber hoses and steel pipe to convert to remote cooler.

Housing has had thermostat modified to allow flow through cooler at all times. I started doing this mod to all track cars I've worked on after I had two t-stats fail and not allow any flow through cooler.

Rubber hoses are still soft and flexible and all the crimp fittings are tight.

You will need the small pipe (part no. 951 107 152 03) that goes between housing and block. And the two o-rings (999 707 043 40) for the pipe.

My local dealer said he had o-rings in stock and the pipe was at the warehouse in Atlanta. All thes will cost about 15 dollars.

Swap your oil pressure relief valve and pressure sender and install.

I will also include a new gasket for housing to block

\$175 includes shipping in 48 contig. states

I also have a late style 1 piece oil pressure relief valve for \$100
