

## If you build it, will they come? (FL)

Posted by Uffitz56 - 02 Jun 2011 19:23

---

Hey guys, I have been lurking these forums for awhile and all the info has been great. I have been really interested in building a spec 944 instead of dumping more money into my s2000, but it seems like a very unpopular class here in florida. I was wondering what you all thought about going ahead with my plans for a 944 build even though there isn't a lot of others in the area? Seems like I could still stay competitive in PTD but I am really hoping to see this class grow here florida. I guess I just trying to talk myself out of spec 944 but I can't really think of any options I like better. Any help or opinions would be great!

Best,

Fitz

Distilled water is pure water. What that means is has not been filtered, but boiled and evaporated to remove impurities. Chemists use only distilled water because they don't want it to be factor when they do experiements. RO water is good, but not as &quot;clean&quot; as distilled.

^^Thanks!

I've been looking at my fan options since the seller warned me about the oem fans restricting flow too much at speed with the oil cooler installed. What do you guys think about installing 1 of these fans with a switch like this:

<http://www.spalusa.com/store/main.aspx?p...il&item=30101507>

<http://www.amazon.com/Flex-lite-31148-II...Manual/dp/B000CNJB28>

If you are concerned about cooling, the oil cooler should not be in front of the radiator as that puts more heat into the radiator. Mine is on the right side and gets air from the fog light opening in the bumper and the light well in the valence. with silicon duct material, and some al ducting too, it works great.

If you do not know the provenance of the radiator, I would advise replacing it with a turbo radiator and be done with any heating issues.

Yea I have no room there if you look at the pic on page 2. Plus the oil cooler is about as wide as the radiator.

That fan has a CFM around 1200. Spal makes a 1700 CFM 13" fan. This is what I run, and I wouldn't go less for a single fan set up. There is a good deal on them here, which is where I got mine: [www.the-fan-man.com/shop/size-pull-part-...-p-204.html?cPath=33](http://www.the-fan-man.com/shop/size-pull-part-...-p-204.html?cPath=33)
